ABSTRACT

This document presents information about the fall 2002 enrollment at Connecticut's college and universities. The report first discusses some general trends in headcount enrollment and then analyzes data on full-time equivalent (FTE) enrollment and demographic details on residence. The 2002 total of 162,748 students is the highest ever for Connecticut, surpassing the previous peak in 1989. This is the fifth consecutive year of growth since 1997, when enrollment was the lowest of the last quarter century. Both the numeric increase in students in fall 2002 and the percentage gain (3.1%) are the largest in at least 25 years. The 12 community colleges provided 44% of that statewide gain of 5,071. The community colleges remain the largest sector of higher education, enrolling more than one in every four students. The share of full-time students has risen from a bare majority (50.7%) of the statewide total in 1992 to 61% in 2002, in large part due to Connecticut's boomlet of traditional-age students. The overall growth rate of 10% in enrollment since 1997 masks the more rapid growth of full-time undergraduates of the traditional age, which increased 24% over the same 5-year period. (Contains 11 tables.) (SLD)

Fall 2002 College and University Enrollment in Connecticut

Highlights

- Total enrollment at Connecticut's college and universities reached an all-time record of 169,748 in fall 2002 (see Table 1).

- The 2002 record total of 169,748 students surpasses the previous peak enrollment of 169,132 in 1989. This is the fifth consecutive year of growth since 1997 when total enrollment (154,029) was the lowest of the last quarter century.

- Both this fall's numeric increase (5,071 students) and percentage gain (3.1%) over 2001 are the largest in at least 25 years. The 12 community colleges, with their increase of 2,227 this year, provided 44 percent of that statewide gain of 5,071. The 2002 increases also are broad-based, for the second straight year of growth across all six major sectors of higher education.

- The 12 community colleges remain the largest sector of higher education, enrolling more than one in every four students. The regional independents are a close second. Those two sectors constitute a slight majority (51%) of statewide enrollment.

- The overall growth this year of 4.2 percent among public institutions reflects a 7.4 percent increase at UConn, a 5.2 percent rise across the 12 community colleges, and a net gain of 0.7 percent at the Connecticut State University. Growth among the independent colleges was both more limited (1.2% overall) than in the publics and more uniform across its three types of institutions.

- Fall 2002 was an all-time record in full-time enrollment, which surpassed 100,000 statewide and was up 14 percent at the community colleges just in the last year. The share of full-time students has risen from a bare majority (50.7%) of the statewide total in 1992 to 61 percent in 2002, in large part due to Connecticut's boomlet of traditional-age students.

- The overall growth rate of 10 percent in enrollment since the trough year of 1997 (15,719 students) masks the more rapid growth of "traditional" full-time undergraduates, which increased 24 percent over the same five-year period. The growth of 16,450 among full-time undergraduates means that the number of all other students (combined) declined by 731 or 1 percent.

www.ctdhe.org

- Total enrollment, by level, is 80 percent undergraduates (51% full-time and 29% part-time), 18 percent graduate students, and 2 percent first-professional students (medical doctors, broadly defined; lawyers and clergy). In 1992, full-time undergraduates and part-time undergraduates were 43 percent and 36 percent of the total, respectively.

- About 74 percent are Connecticut residents, 21 percent out-of-state and 4 percent non-resident aliens (non-citizens in the U.S. on student visas). There has been a gradual increase in the proportion of out-of-state students. Ten years ago, that split was 81 percent, 16 percent and 3 percent, respectively.

- In terms of race/ethnicity, 19.6 percent are minority students (8.9% African American, 6.5% Hispanic/Latino, 3.8% Asian-American, and 0.4% American Indian). Ten years ago, the minority total was only 13.4 percent.

- Total enrollment in fall 2002, by gender, is 58 percent female, about the same as a decade ago.

- Total enrollment in fall 2002, by age, is 61 percent under age 25, 21 percent aged 25-34, 10 percent aged 35-44 and 7 percent age 45 and up.

FALL 2002 COLLEGE AND UNIVERSITY ENROLLMENT IN CONNECTICUT

Total enrollment at Connecticut's college and universities[1] reached an all-time record of 169,748 in fall 2002 (see Tables 1 and 3). This report first discusses some general trends in headcount enrollment and then analyzes data on full-time equivalent (FTE) enrollment and demographic details on residence, race, freshmen, gender and age.

GENERAL TRENDS

The 2002 total of 169,748 students is the highest ever for Connecticut and surpasses the previous peak enrollment of 169,132 in 1989. This is the fifth consecutive year of growth since 1997 when total enrollment (154,029) was the lowest in the last quarter century.

Both this fall's numeric increase (5,071 students) and percentage gain (3.1%) over 2001 are the largest in at least 25 years. The 12 community colleges, with their increase of 2,227 this year, provided 44 percent of that statewide gain of 5,071; UConn (with its 1,791 net increase) furnished another 35 percent of that statewide growth.

	Total Enrollment Fall 2002	Percent of State Total
Public Institutions		
University of Connecticut	25,842	15%
Connecticut State University	36,126	21%
Community Colleges	44,869	26%
U.S. Cost Guard Academy	952	1%
Subtotal	**107,789**	**63%**
Independent Institutions		
National Independents	18,805	11%
Regional Independents	41,131	24%
Two-Year Independents	2,023	1%
Subtotal	**61,959**	**37%**
Statewide Total	**169,748**	**100%**

The increases for 2002 also are broad-based. This was the second straight year of growth across all six major sectors of higher education, a feat that last occurred in 1983.

The 12 community colleges remain the largest sector of higher education, enrolling more than one in every four students. The regional independents are a close second. Those two sectors constitute a slight majority (51%) of statewide enrollment.

The overall growth this year of 4.2 percent among public institutions reflects a 7.4 percent increase at UConn, a 5.2 percent rise across the 12 community colleges, and a net gain of 0.7 percent at the Connecticut State University (CSU). Growth among the independent colleges was both more limited (1.2% overall) than in the publics and more uniform across its three types of institutions.

Fall 2002 was an all-time record in full-time enrollment, which surpassed 100,000 statewide and was up 14 percent at the community colleges just in the last year. Full-time students were a bare majority (50.7%) of the statewide total in 1992, but that share has risen for 10 consecutive years to 61 percent in 2002.

[1]Not included in this total is Charter Oak State College, which enrolled 1,561 part-time undergraduates in fall 2002. Many Charter Oak students are simultaneously enrolled elsewhere in Connecticut and thus already appear in the statewide totals.

The overall growth rate of 10 percent in enrollment since the trough year of 1997 (15,719 students) masks the more rapid growth of "traditional" full-time undergraduates, which increased 24 percent over the same five-year period. The growth of 16,450 among full-time undergraduates means that the number of all other students (combined) declined by 731 or 1 percent.

The total fall 2002 enrollment consists of 80 percent undergraduates (51% full-time and 29% part-time), 18 percent graduate students, and 2 percent first-professional students (medical doctors, broadly defined; lawyers and clergy.)

Full-Time Equivalent (FTE) Enrollment

FTE enrollments are a more standardized and comparable measure because they express the total credit hours taken by all students as the hypothetical headcount if every student were taking a full-time course load. Table 2 displays both headcount and FTE data by level for every institution, along with the percent change for each total since last year.

Table 2 shows that the statewide headcount enrollment of 169,739[2] translates into 123,946 FTE enrollment, meaning that the "average" student is just under three-fourths full-time (.73 FTE). The 12 community colleges, whose headcount enrollment of 44,869 (26% of the state total) made it the largest of the six sectors, falls to third-place in its FTE enrollment of 23,487 — 19 percent of the state total, behind the 26 percent share of statewide FTE for the regional independents and the 21 percent for CSU.

The increase of 4.6 percent in FTE enrollment since 2001, compared to the 3.1 percent rise in headcount enrollment over the same period, indicates an increased average credit load. (The fall 2002 average of .73 FTE was .72 FTE in fall 2001.)

Although total headcount this year was only 0.4 percent higher than the previous record headcount in 1989, this year's FTE of 123,946 is a full 12 percent above the 1989 FTE of 110,638. Since 1992, headcount enrollment is up less than 4,000 while FTE enrollment rose by more than 15,000, this due in large part to the increase of the traditional-age student cohort graduating from Connecticut high schools.

The FTE data also makes the growth at the community colleges seem more impressive than with just the headcount data. The overall headcount growth for those 12 institutions was 5.2 percent, with two colleges registering double-digit percentage gains, and no school declining. This was the first time in at least 15 years where none of the community colleges experienced a drop in headcount enrollment. The overall FTE growth was 8.9 percent, four colleges saw double-digit gains and the two colleges with no headcount growth or growth of only one student had FTE increases of 3.9 percent and 1.8 percent, respectively. Tables 3 (headcount) and Table 4 (FTE) present 15 years of enrollment data.

Demographic Profile

Residence: Total enrollment in fall 2002 is comprised of 74 percent Connecticut residents, 21 percent out-of-state, and 4 percent non-resident aliens. (Non-resident aliens are non-citizens who are in the U.S. on student visas.) Ten years ago (fall 1992), that split was 81 percent Connecticut, 16 percent

[2]From this point forward, the analysis excludes the nine part-time graduate students enrolled at St. Thomas Seminary, for whom FTE and demographic details are not available. The statewide total in all subsequent tables is thus 169,739, rather than the 169,748 total already introduced.

out-of-state, and 3 percent non-resident alien; last year, it was 74 percent, 21 percent and 4 percent.

Table 5 shows this breakdown by level and sector during the last six years. Among undergraduates in recent years, the in-state share of students ranges from virtually all (i.e., 97%-98%) at the community colleges and the UConn regional campuses to less than 15 percent at the national independents (Connecticut College, Trinity, Wesleyan and Yale.) Non-resident aliens represent a much larger share at the graduate level, especially at UConn and the national independents, primarily Yale.

Interestingly, the University of Connecticut-Storrs campus has experienced considerable growth in the number and proportion of out-of-state undergraduates, nearly doubling in number from 1,683 in 1997 to 3,373, and now representing 23 percent of total undergraduates. Although the number of in-state undergraduates attending the Storrs campus has been rising each year since 1996, it is still over 1,000 students less than the peak set in 1988. In-state undergraduates now represent just 76 percent of the total, down from 87 percent in the late 1980s.

RACE/ETHNICITY: Data on race and ethnicity among college students in Connecticut for fall 2002 appear in Tables 6 (all enrollments) and 6-A (undergraduate enrollments only.) Total enrollment of minority students is just under one in five (19.6%) among all students, and two percentage points higher (21.6%) among just undergraduates[3].

The table below adds both a historical perspective and a comparison with the general population. In the last 20 years (1982-2002) the share of total minority students has more than doubled (from 8.2% to 19.6%), with the larger increases coming in the early 1990s. The share of African Americans has almost doubled during the last 20 years, while the percentages of both Hispanics and Asian Americans have more than tripled. The share of American Indians has remained flat and low, although their raw numbers rose by 12 percent, from 574 to 644.

	Fall Enrollment in Connecticut		Connecticut Population 2000 Census	
	1982	2002	All	18 or Older
African American	4.7%	8.9%	8.7%	7.9%
Hispanic/Latino	1.9%	6.5%	9.4%	8.0%
Asian American	1.2%	3.8%	2.4%	2.4%
American Indian	0.4%	0.4%	0.2%	0.2%
Total Minority	**8.2%**	**19.6%**	**20.7%**	**18.5%**

This table also shows Connecticut data on race and ethnicity from the 2000 U.S. Census, both for the entire population (all ages) and the adult (18 or older) population. The overall minority share among college students in fall 2002 (19.6%) is slightly higher than that same share among the general adult population (18.5%) and slightly below the share among all Connecticut residents (20.7%.)

Among the four minority communities, Hispanics are the only group whose representation among college students still is significantly less than their representation in the general population, under either definition — total or adult. The share of African Americans among college students is only

[3]This data understates minority enrollment because 4.3 percent of all students in fall 2002 are non-resident aliens here on student visas, and 8.7 percent were reported as race/ethnicity unknown. Unless all of these 13 percent of students are White non-Hispanic, the minority share would be higher. There is a similar, but probably much smaller, undercount in the U.S. Census data on Connecticut. The combined share of the population who are "some other" race and those who are bi- or

slightly higher than the share among the general population, although more distinctly higher vis-à-vis the adult population.

There generally is more under-representation of minority students among degree recipients than there is among the general student population. In fall 2002, the share of minority students among undergraduates at the state institutions was 23 percent, while the minority share among those receiving bachelor's or associates degrees from those schools during 2001-02 was 17 percent. It is hoped that recent gains in minority enrollments will soon show up in degree production. *[See DHE report, 2001-02 Degrees Conferred by Connecticut Institutions, January 2003: http://www.ctdhe.org/info/pdfs/DegreesConferred0102.pdf].*

FIRST-TIME FRESHMEN: A total of 26,619 students enrolled as first-time freshmen in fall 2002 (see Tables 7 & 8). Of that total, 22,375 (84%) were full-time.

First-time freshmen represent 54 percent of those with freshmen status (the other 46% were enrolled in the past, but have not earned enough credits to reach sophomore status), 23 percent of all degree-seeking undergraduates, 20 percent of all undergraduates, and 16 percent of all college students. (That 16% freshmen share of total enrollment rose in each of the last 10 years, and the raw numbers of freshmen grew from 21,782 in 1992 to the 26,619 in 2002.)

The number of 26,619 first-time freshmen is only slightly less than the total graduate student count of 28,194. (That graduate student total includes those seeking all degrees and at every stage in progress toward those degrees.) There are almost eight first-time freshmen for every professional student (medical doctors, lawyers and clergy), which total 3,511.

Seventy-nine percent of first-time freshmen graduated from high school in the last year, two-thirds (67%) were from Connecticut, and just under half (48%) were both recent high school graduates and from in-state. The pool of in-state, high-school graduates is expected to increase until the year 2008.

GENDER: The 97,696 female students enrolled in Connecticut colleges in fall 2002 constitute 58 percent of the total enrollment, with both that number and that percentage representing all time records (see Tables 9 & 10). In 2000, females were 49 percent of the Connecticut population in the 15-29 age brackets, according to the U.S. Census.

This increase is part of a trend that started at least 42 years earlier. Women represented 35 percent of undergraduate enrolments in 1960. They were 40 percent of all enrollment in 1970, became a majority of Connecticut college students in either by 1978, and were at 55 percent by 1986 before reaching 58 percent in 2002.

A telling indicator of this growth is that the 23,181 increase in total enrollment during the past 26 years breaks down into a 3,810 (or 5%) decline among men and a 26,991 (or 38%) increase among women. Because the number of Connecticut males increased over this period, a male in 2002 is less likely to attend college than a male was in 1976.

The female majority is almost uniform, with women representing 58 percent of both undergraduates and graduate students, although they are more likely than men to be part-time students at both levels. However, women fall just short of a majority (48%) in the first-professional fields of training medical doctors (broadly defined), lawyers and clergy. Women are extremely likely to become a majority at this level soon, because they were 29 percent of first-professional students in 1976, have been above 40 percent since 1986, and first exceeded 45 percent in 2000.

The decisive female majority in college enrollments also appears in degree recipients. The majority is actually slightly magnified at that end of the educational pipeline, because women received 59 percent of all degrees and awards during 2001-02, vs. their 58 percent share among all enrollments in fall 2002. (Women were 57% of all enrollments in each of the last three years, and 56% of enrollments for eight years before then.).

AGE: Connecticut undergraduates have become younger in recent years (see Tables 10A & 11). The percent of undergraduates age 25 or older, peaked at 37 percent in 1994 and has declined every year since to 28 percent in fall 2002.

This general pattern holds at each of the three largest sectors in Connecticut higher education, which together enroll 75 percent of all undergraduate students. At the community colleges, regional independents, and CSU, the share of undergraduates over age 25 has decreased for at least five consecutive years – from 58 percent in 1997 to 50 percent in 2002 at the community colleges, and from 30 percent then to 22 percent now at both the regional independents and CSU. (The share of older undergraduates also seems to be declining at UConn; no clear trend is evident at the national independents and the two-year independents.)

The following table below shows the age distribution for both all enrollment and undergraduate enrollment in fall 2002[4]. It also includes Connecticut's age distribution from the 2000 Census, which should have counted every person living in the state (regardless of her or his permanent residence) as of April 1, 2000. (Students physically in Connecticut, whether living on or off campus, should have been counted by the Census Bureau as residing in Connecticut.)

		Total Enrollment Fall 2002		Undergraduate Enrollment Fall 2002	
Age	CT-2000 Census	Number	Est. % Attending	Number	Est. % Attending
-14	709,075	*	*	*	*
15-17	132,613	3,978	3%	3,959	3%
18-19	84,014	40,048	48%	40,038	48%
20-24	187,571	59,624	32%	52,494	28%
25-34	451,640	35,550	8%	18,613	4%
35-44	581,049	17,411	3%	11,509	2%
45-59	657,768	10,544	2%	6,689	1%
60-64	131,652	611	0.5%	439	0.3%
65+	470,183	1,049	0.2%	905	0.2%
Total	**3,405,565**	**168,815**	**5%**	**134,646**	**4%**

Est. percent attending = Number of college students in an age group divided by the total population in that age group. Median age = 22 for undergraduates; = 30 for graduate & first professionals combined

[4]This analysis assumes that all college students under age 18 are in the 15-17 age bracket, which is probably close to the truth. Because this data includes all students taking courses for credit (even if not degree-seeking), there may be a few 14-year-old high school students taking one course on campus. This non-degree-seeking option may also explain the 19 students under age 18 who seem to be graduate students — e.g., students enrolled in one graduate-level course. (Sixteen of those 19 students are enrolled at UConn, and one each is at Yale, SCSU, and Albertus Magnus.) Note that the statewide total of 168,815 and undergraduate total of 134,646 are slightly smaller than they appear earlier in this report, because age was unknown for a very small share of students.

Although there is much imprecision in this comparison, the data does give a rough sense of the share of each age bracket that attends college — for example, the 40,038 Connecticut undergraduate students who are aged 18 or 19 vs. the 84,014 Connecticut residents aged 18 or 19 suggests that just under half (48%) of those 18 or 19 year-olds are undergraduates. Slightly more than a quarter (28%) of those aged 20-24 seem to be undergraduates, while only one of those between 25 and 34 (inclusive) appear to be enrolled as undergraduates.

Three surprises emerge from this data:

- Those aged 18-24 represent just under eight percent of the state's total population but make up 69 percent of the state's undergraduates.

- Those aged 15-17 are almost two times more likely to be undergraduates than those 25 and up — 3.0 percent among those 15 to 17 vs. 1.7 percent among those aged 25 and up. (Because those 25 and up represent 67 percent of the state's population, and those 15-17 are just 4 percent of the residents, that older cohort provides many more students, but the younger folks are much more likely to be students).

- Those under age 18 (the vast majority of whom could not possibly be college students) nevertheless are more than twice as likely to be undergraduates as those 60 and older — 0.47 percent among those under 18 vs. 0.22 percent among those 60 and over.

This data is not meant to minimize the role of students aged 25 or older. They represent 39 percent of all enrollments in Connecticut — 28 percent of undergraduate, and 79 percent of combined graduate and first-professional students. Among undergraduates, those 25 and older are a slight majority at the community colleges, nearly a majority at the two-year independents, and more than one-fifth at both CSU and the regional independents. Eight of the 45 colleges in this state that enroll undergraduates have more than 2,000 undergraduates 25 or older; 23 of 45 enroll more than 500 undergraduates who are 25 or older.

SUMMARY

The fall 2002 enrollment data is very positive for Connecticut. Enrollment is at an all-time high, with growth in all major sectors. Growth was faster in both full-time enrollment, and among all minority groups. Two "traditional" groups of students (full-time undergraduates and first-time freshmen) also saw hefty growth. Because the number of in-state high-school graduates is expected to rise until 2008 (reflecting a peak in births in 1990), we can expect growth in those more "traditional" college-student populations for at least the next six years.

The big question is the economy. Higher education often is a counter-cyclical economic sector — that is, doing relatively well when the economy is bad (with potential workers seeking training and existing/displaced workers wanting re-training) and relatively poorly when the economy is booming (when greater job availability makes work seem more attractive than pursuing education).

We should expect even faster growth in enrollment from a combination of the growing populations of both new high-school graduates and casualties of the economic downturn. The downside to growth may be problems with either overall capacity (ability to absorb so many students) and/or a mismatch between supply and demand for specific programs.
